

KX-TGP700

Installation

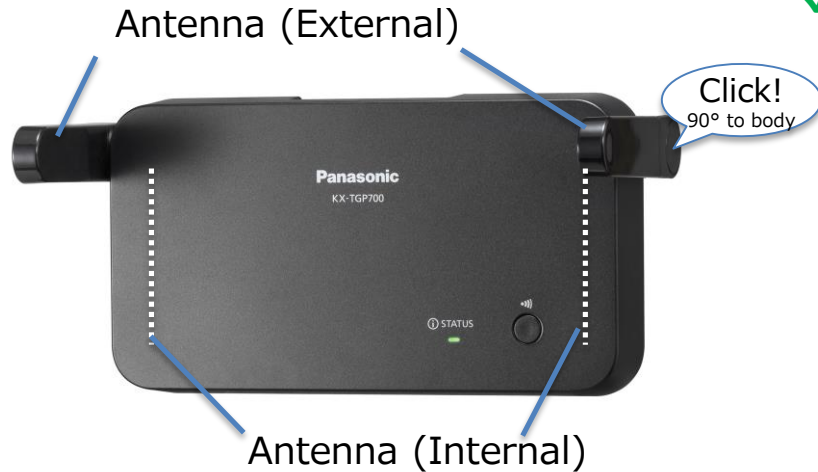

31st July 2020
Rev 1.1

Revision history

Date	Revision	Changes
16 th March 2020	Rev 1.0	Initial Release
31 st July 2020	Rev 1.1	P3 : Added detailed explanation about the antenna position

TGP700 Installation

- Installation

✓ Antennas (external) should be perpendicular to the body for the best performance.

Note

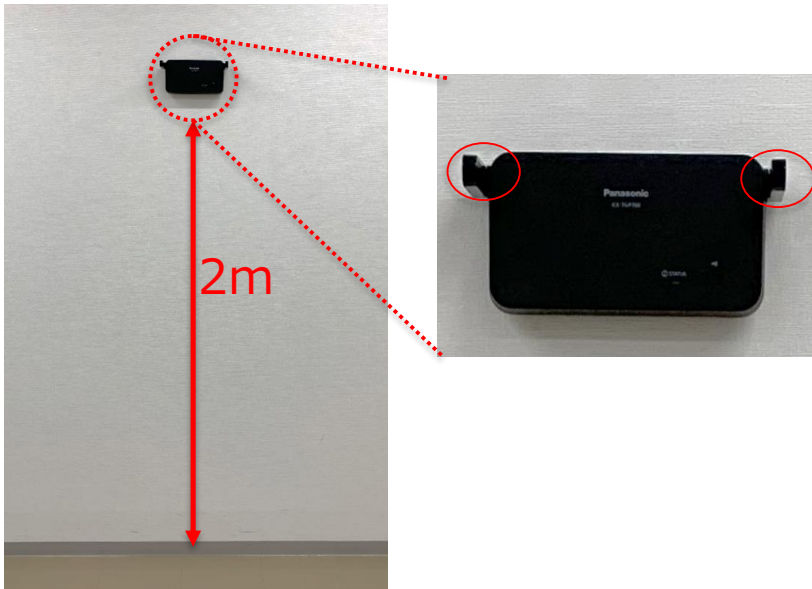

- TGP700 has 4 antennas (2 x external and 2 x internal).
- By being positioned the external antennas perpendicular to the internal antennas, TGP700 can receive the radio waves with any angles effectively.
- 4-antennas system without radio interference in such compact body are realized by Panasonic's well-designed radio wave directivity, fast antenna switching and channel control technique.

*Although it can be used in these external antenna positions, it is not recommended because the signal strength is weakened

Important Notice

Recommended

- Indoor
- At a height of 2 meter or more for less obstructions

Not recommended

Do not install in areas covered with metal.

Metal blocks radio waves.

Do not operate surrounded other DECT devices.

When placing it, keep it at least 1m away.
Don't put too many devices even if they are 1m away.

*After installation, check the radio wave condition of the handset in a place where it is often used.
